Brief description

The turntable TT 1.2 WI is especially for installation in fully anechoic electromagnetic absorption chambers. The carrier plate is made of waterproof, laminated and lacquered wood. There is a division plate between the wooden plates, which can be covered with ferrite tiles in order that there are no metal parts above the ground plane.

A 285 mm diameter opening in the center of the turntable provides the capability to insert power supply for testing.

The LAN (TCP/IP) - interface provides an additional control option for all functions, when operated with the FCU^{3.0} or NCD Controller
